1. Facts:
    - A company uses an AI tool to sort the applicants.
    - The tool makes the employment process faster and more efficient.
    - The tool refuses a group of qualified applicants more than the others.
2. Stakeholders:
    - Company.
    - HR managers.
    - Qualified Applicants.
    - Society.
    - The AI Tool Developers.
3. Ethical Principles:
    - Fairness: meaning qualified applicants should have equal opportunities.
4. Alternatives:
    - Fixing the AI tool to treat all the qualified applicants with just.
5. Impact:
    - The Original Case (without any fixes): The company won't pay anything to repair the tool. The HR managers wouldn't know who is refused by mistake. Instead, they will rely on the AI tool, which will eliminate some eligibles. The applicants won't get treated equally, leading to a bad reputation for employment at the company.
    - After Fixing The AI Tool: The company will pay some money to repair the AI tool. That will reflect on the qualified applicants to be accepted. The HR managers will put an eye on that AI tool; Preventing any unjustified rejection to the applicants. The applicants will be accepted if they are qualified, regarding their belonging to any specific group.
6. Professional Codes:
    - According to the ACM Code, computing professionals should consider fairness and avoid unfair harm.
7. Should the company continue using the tool? Why or why not?
    - No, it shouldn't. As it treats the qualified applicants unfairly.
    - According to Consequentialism (Ethical Principle), the company gets damaged by the tool more than getting benefits, which is not from its advantage.
    - Ensuring everyone gets an equal opportunity through Fairness (Professional Code), that tool must not be used before it is fixed.
